

Children's Room

We are happy to say that our new Children's Room now is taking shape, and has been in use with great success.

In the beginning of October, we wrote a proposal to the Advisory Council (AC), that we wanted to create a children's room to serve the Immanuel Church children's ministry, and other congregations children's ministry that use our facilities. We are so happy and proud to be a church for families, so it is important for us to have a room the children love and feel inspired to be in, and a space of their own.

We got a positive response from the AC and the green light to buy in the equipment we wanted, to make the room pleasant for the children, among other things a Smart TV for use in the Children's Church, a carpet, bean bags and table tennis.

Tony, our genitor, has done an amazing job transforming the room by putting the

carpet on the floor, installing the TV on the wall and painting a little table for the smallest kids in a nice green colour. We are really grateful for the effort his has done. We still hope it is possible to find a graffiti artist to come and paint a wall or two in the room to make the room more colourful and inspiring to be in. The graffiti would connect the room with the local Florentin area, which is renowned for its amazing graffiti artwork.

At our last Fellowship meal and Christmas workshop, the children's room was in use for the first time, and with great success, we must say. While the adults where busy making Christmas crafts, the kids had a lot of fun of their own. Some joined the craft activities, others watched a Christmas movie and creatively played with the beanbags building castles, while others enjoyed playing table tennis. The table tennis was in general a big hit for both the adults and the children, playing the game "Around the Table". All in all, these changes gave a positive and amazing sense of community, and it was nice to see adults and children's having fun together.
